TABE 13 and 14 Scoring Tables for Print Forms

Types of Scores

Number-Correct or Total points (NC) is the number of items answered correctly by the examinee on any given test section, or the total number of points obtained, if there are multi-point items. Since the number of items or points in a test section may vary by content area and test level, the number-correct or points obtained score has no value in the comparison of levels of achievement. DRC uses the number-correct or total points score to derive the scale score (SS), SEM, and NRS Level.

Scale Score (SS) is used to describe achievement in units of a single, equal-interval scale that is applied vertically across all levels of TABE 13 & 14. These scores are expressed in three-digit numbers that range from 300 to 800. Being on an equal-interval scale means that the distance between two scale scores has the same meaning at different points on the scale. Scale scores are used as a basis for deriving the various other TABE 13 & 14 scores that can be used to describe test performance.

Scale scores have the following limitations:

- The equal-interval property of the scale makes scale scores especially appropriate for various statistical purposes. For example, they can be added, subtracted, and averaged across test levels. Such computations permit direct comparisons among classes, schools, or centers.
- Each examinee is expected to obtain the same scale score regardless of the form or level of TABE 13 & 14 administered, within the limits of the Standard Error of Measurement (SEM) and Content coverage.
- Scale scores may be used to measure educational gain for examinees who pre-test with TABE 13 & 14 and then post-test with TABE 13 & 14 after an appropriate interval of instruction.

Scale scores have the following limitations:

- Scale scores are based on an arbitrary scale that has no inherent, or readily apparent, meaning.
- Scale scores obtained in one content area should not be compared to scale scores in another content area because separate scales were developed for each TABE 13 & 14 content area. A scale score of 500 in Reading, for example, does not necessarily have the same meaning as a scale score of 500 in Mathematics.

Standard Error of Measurement (SEM) is not a test score, but is important for the correct interpretation of test scores. It is assumed that measurement error is associated with any test score. The SEM is an estimate of the amount of error to be expected in a particular score from a particular test. When scores are being analyzed and interpreted, the results are only descriptions of a particular performance by the individual or group on the specific test administered. From these descriptions, inferences about the abilities

of the examinees can be made. The fact that such inferences may not represent an individual's true status is taken into account by means of the SEM. The SEM associated with each TABE 13 & 14 scale score is shown in scale score units.

The SEM should be taken into account when test scores are being interpreted. The magnitude of the SEM varies from test to test; it also varies according to where an examinee's score falls within the range of a specific test, which makes it a conditional SEM. If a score is near the floor or ceiling of the range of performance measured by a given test, the corresponding SEM will be much larger than it would have been if the score had been near the middle of the range. The smaller the SEM, the more accurate the test score.

NRS Level provides the reported NRS Level. Note that each TABE level test has content aligned specifically to a range of NRS levels and thus a student can only be classified into those NRS levels. Due to the content alignment, as well as measurement properties of each TABE level test, if a student tests "out of range" (O/R; more than one NRS level below the targeted level), then they will not receive a scale score or NRS level and they will need to take a lower TABE level test. If a student scores more than one NRS level above the targeted level, then a (*) sign will appear next to the NRS level and their score will be set to the highest possible scale score, which is one above the targeted level. In this case, students may want to test with a higher TABE test in order to better assess their ability level.

Domain-Level Performance Tables

Teachers and educational decision-makers frequently need diagnostic information that can be used to inform instructional strategies and help identify examinee strengths and weaknesses. This information can be derived from examinee scores on subsets of test questions, called *domains*.

Examinee performance on a domain can be characterized as being in the Non-Proficiency, Partial Proficiency, or Proficiency. When used in conjunction with other measures, such as observation, homework, and other information available from interacting with students in regular classroom assessments and activities, TABE 13 & 14 domain levels are useful in augmenting information from other sources, such as teacher observations and classroom assessments.

Domain-Level Proficiency Scores

DRC Research estimated Domain-Level Proficiency scores using an item response theory approach for domain level (e.g., Geometry), in conjunction with the NRS level cut score that is one above the targeted TABE level. For example, TABE Level E used the NRS Level cutscore that would place a student in NRS Level 3. Given the fact that the domains have fewer items when compared to the total score, with larger SEMs and lower reliability, the SEM at the cutscore was utilized to build a confidence band around the cutscore. The confidence band was based on +/- 1.5 times the SEM at the domain cutscore. Subcores that are below the confidence band, and thus well below the cutscore, will

be an indication of Level 1 (Non-Proficiency), while subscores within the confidence band, which is just below or above the cutscore, will be an indication of Level 2 (Partial Proficiency), and subscores above the confidence band, which are well above the cutscore, will be an indication of Level 3 (Proficiency).

The cutscore is specific to the TABE Level, which is the NRS cutscore that would place a student into the next highest NRS level. This IRT look-up table approach for the domain-level scoring, which utilizes the IRT parameters within a domain and the SEM at the cutscore, allows for a more reliable score at the domain level. This IRT approach also creates comparable performance level scores across Forms 13 & 14, even if they have different numbers of score points or items, compared to simple number- or percent-correct scoring.

Interpreting Locator Test Scores

In order to obtain the most reliable test results for each examinee, it is important to administer the level of TABE that best targets the examinee's skill level in each content area of the test.

The scores an examinee receives on the Locator tests indicate the level(s) of TABE the examiner should administer.

If an examinee's Locator Test scores indicate significant differences in Reading, Mathematics, and Language skills (e.g., more than two TABE levels apart), the examinee could be administered TABE tests from different levels. (For example, an examinee's Locator Test scores might indicate that an examinee should take Level M Reading, but Level D Mathematics.)

NOTE: The cut points are guidelines. Use them in conjunction with any knowledge of the examinee's previous performance to help determine placement in TABE levels.

Reading	Mathematics	Language	TABE Level to Administer
0–6	0–7	0–7	E
7–10	8–10	8–12	M
11–13	11–14	13–14	D
14–16	15–16	15–16	A

Converting Number-Correct or Total Points Obtained Scores for Each Print Subtest

The majority of the tables in this scoring tables book have the same configuration. The points obtained or number-correct (NC) scores for each subtest are listed in the first column of each table. Scale scores appear next to the number-correct scores. They are followed by the conditional standard error of measurement (SEM) and then NRS Level. However, at the Domain level, the tables show number correct or points obtained to Proficiency Level 1 (Non-Proficiency), Level 2 (Partial Proficiency), or Level 3 (Proficiency).
